

ASGE EDUCATION MISSION

The American Society for Gastrointestinal Endoscopy (ASGE) is the leading educator in the provision of high-quality, state-of-the-art training in diagnostic and therapeutic endoscopy procedures, aligned with up-to-date education on the management of associated gastrointestinal diseases.

ASGE'S Target Audience

All healthcare professionals who practice gastrointestinal endoscopy, their professional care teams, and trainees who are involved with, or support the practice of endoscopy at regional, national and international levels.

ASGE'S Content Areas

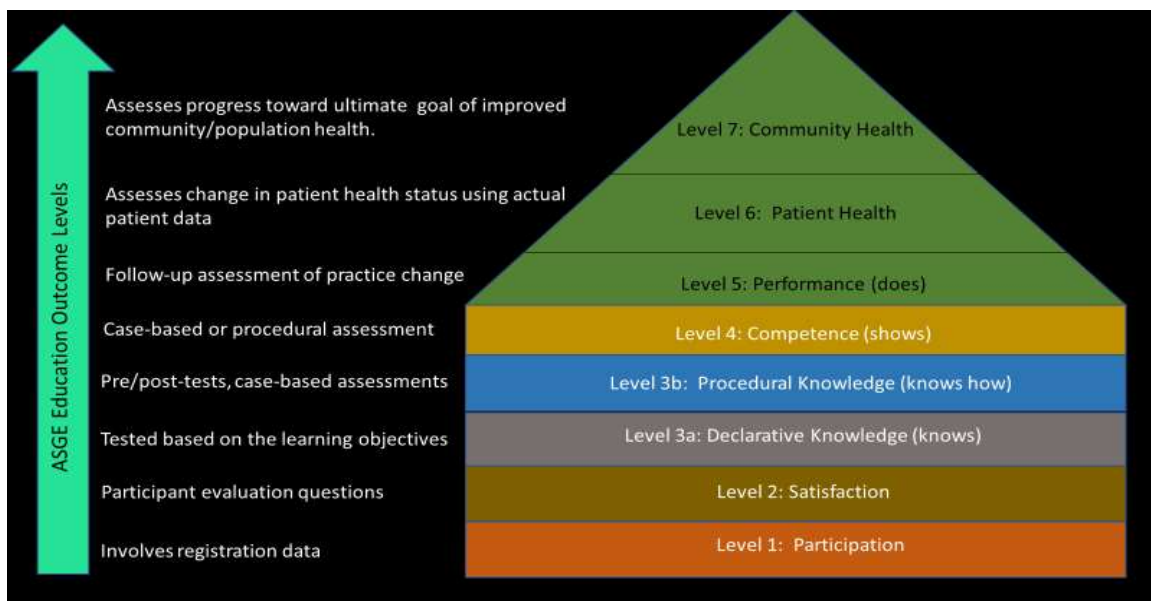

Evidence-based content and other quality benchmarks related to gastrointestinal diseases, endoscopy, including epidemiology, pathogenesis, prevention, diagnosis, therapy, practice management, quality, and process improvement techniques.

ASGE'S Educational Delivery Mechanisms

Provide multiple learning formats with cutting-edge and innovative educational technologies and instructional design methods, that meet diverse educational needs of our membership.

ASGE'S Expected Results

Through transfer-of-learning methodologies, correlate select outcomes from learner engagement at ASGE educational activities into practice settings. This is measured in part by process effectiveness and/or change in healthcare delivery by GI physicians and their care team, who perform endoscopic procedures and manage associated gastrointestinal diseases. The image below highlights ASGE's outcome level designation and anticipated expected results.

Approved by ASGE Governing Board August 2017; ASGE's transfer-of-learning processes are in part, based upon Donald Kirkpatrick's level of evaluation model and Ron and Susan Zemke's transfer strategies model.
