ASGE MASTERCLASS: Barrett's Esophagus, GERD and Esophageal Adenocarcinoma

February 5, 2022 | Downers Grove, IL and Virtual

Earn
AMA PRA
Category 1 Credits™

Review how patients initially present and endoscopic landmarks for Barrett's esophagus (BE) diagnosis, with attention to newer technologies that have been developed to make palisade vessels more visible. Compare and contrast the three main ablation techniques used for BE: radiofrequency ablation (RFA), argon plasma coagulation (APC) and cryotherapy. A review of antisecretory therapy with proton pump inhibitors (PPIs) or elimination of reflux with anti-reflux surgery will also be discussed.

Learn about the prevalence of BE and trends throughout North America, Europe and Asia-Pacific locations, along with the predicted future incidence of BE when you join the experts virtually!
