ASGE Masterclass: Colonoscopy focuses on current techniques, tips and tricks and trends forward in colonoscopy. Colorectal cancer (CRC) has increased in adults aged 40 to 54 years, whereas colonoscopy rates increased only for adults aged 45 to 54 years, suggesting a mismatch in colonoscopy trends and CRC incidence patterns. We will discuss why these trends are occurring and what gastroenterologists can do to shift this pattern.

Learn about the anticipated growth of colonoscopy devices in the coming years, promising future emergence of more front-line therapies and favorable initiatives that will likely fuel the use of colonoscopy expansion. We will also address how AI colonoscopes could increase colorectal polyp detection rates. Join us virtually and get your questions answered with interactive Q&A!

LEADING EXPERTS

Michael Bourke,
MD, FASGE

Aasma Shaukat,
MD, MPH

Amit Rastogi, MD,
FASGE
