Title: Addressing Challenging Colonoscopies Due to Inadequate Prep - An Intraprocedural Cleansing Device to Expedite a High-Quality Colonoscopy.

Addressing Challenging colonoscopies due to inadequate prep - An intraprocedural cleansing device to expedite a high-quality colonoscopy. The Pure-Vu System improves visualization to expedite a high-quality colonoscopy the first time. The Pure-Vu® System is a single use oversleeve that easily fits on standard and slim colonoscopes to facilitate intraprocedural cleansing of the colon. It provides physicians support in addressing emergent or challenging colonoscopies by safely and rapidly providing clear visualization of the colon wall. Suboptimal bowel preparation can have a devastating impact on the effectiveness of colonoscopies, resulting in increased adenoma miss rates, delayed diagnosis and extended hospital stays driving up hospital costs and interfering with quality care. You and your patients deserve more.

Title: Newer Endoscopic Innovations in IBD stricture management

IBD stricture management remains a significant clinical challenge. Medical treatment is considered the first-line treatment with anti-TNF agents providing considerable benefit among the available medical treatments. In fibrotic strictures or cases refractory to medical treatment, an endoscopic or surgical approach could be considered depending on the location, length, and severity of the stricture. This presentation will review emerging endoscopic and surgical management techniques in IBD strictures.
