ASGE’s NEW Virtual Esophagology program will cover updated management in achalasia and other motility disorders, gastroesophageal reflux disease, eosinophilic esophagitis, and more. This integrated course will feature state-of-the-art lectures by experts in the field, along with question and answer sessions and presentation of case-based panel discussions. Participants will walk away from this program with updated knowledge to improve their care of patients with esophageal diseases.

WHO SHOULD ATTEND?
The ASGE Esophagology program is designed for all gastroenterologists and their practice teams who seek trends and resources in how best to incorporate disease diagnostics and management based upon current research along with up-to-date standards of care. All GI practices who see this patient population in their practice and GI Fellows, specifically 2nd year Fellows, will benefit from participating in this program.

WHAT YOU WILL LEARN
1. Understand high quality diagnostic upper endoscopy.
2. Compare and contrast diagnostic testing options for patients with known or suspected GERD.
3. Discuss diagnostic testing options for patients with dysphagia including endoscopy, high resolution manometry and impedance planimetry.
4. List management techniques learned for patients with eosinophilic esophagitis.
5. Understand how best to communicate with patients on treatments for reflux, including minimally invasive approaches.
6. Identify approaches for patients with esophageal motor disorders including achalasia and spastic disorders.
7. Discuss endoscopic complications in the esophagus.
